

Concentration (Sight Words)

What is "Concentration" and why is it important?

"Concentration" is a game that helps your child learn sight words. Instant recognition of sight words is an important component of fluent reading.

How can I use "Concentration" with my child?

Choose 7 to 15 words from your child's sight word or "Word Bank" list. Write them on duplicate word cards. To play the game, turn the cards face down and shuffle them. Have your child turn over two cards and read them. If the cards match and your child reads them correctly, he can place them in a pile, keep them and take another turn. If the cards do not match or if he cannot read them, you take your turn. When all the cards are matched and read, the person with the most cards wins.
